◀ Installing the station 5 tracking chamber in the test beam area (ALICE)

A TRD module of the ALICE experiment, opened up in the clean room

"CERN is a wonderful place to learn. The excitement about the LHC shows and you feel a part of it." Pooja Gupta PhD student

"I like my job and I have a great supervisor who treats everyone as an equal. However, working in a 'man's world' is not always easy and it needs plenty of self-esteem and force to stand up and get your point through." Isabel Brunner, Radiation protection engineer.

"Our experience working for the LHC Access system has been very interesting. Women and men do tend to approach tasks in different ways. The years of the installation and commissioning of the system were pretty hard, our organizational and methodological skills together with our flexibility were very valuable and appreciated by our colleagues and supervisors who are all men" Silvia, Eva and Miram (engineers of the LHC Access project)

"I just love this work. I love what I do." Alessandra Ciocio

"...physics is art, esthetics, beauty and symmetry." Fabiola Gianotti

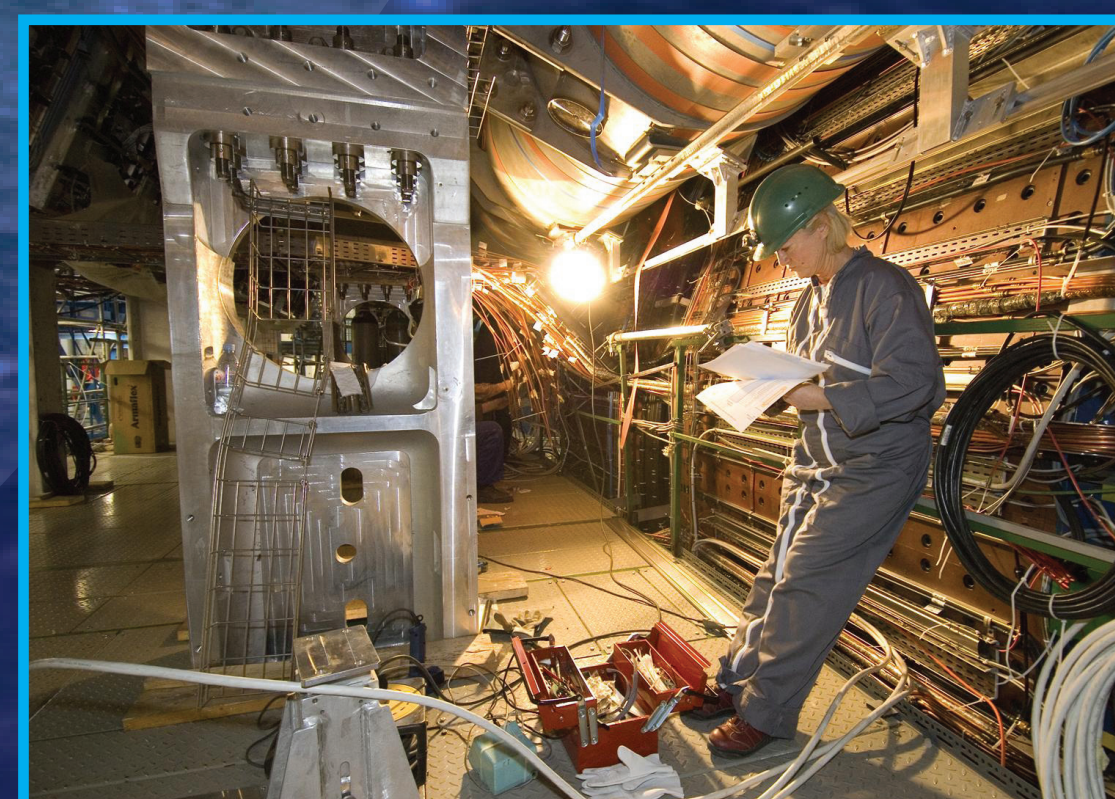

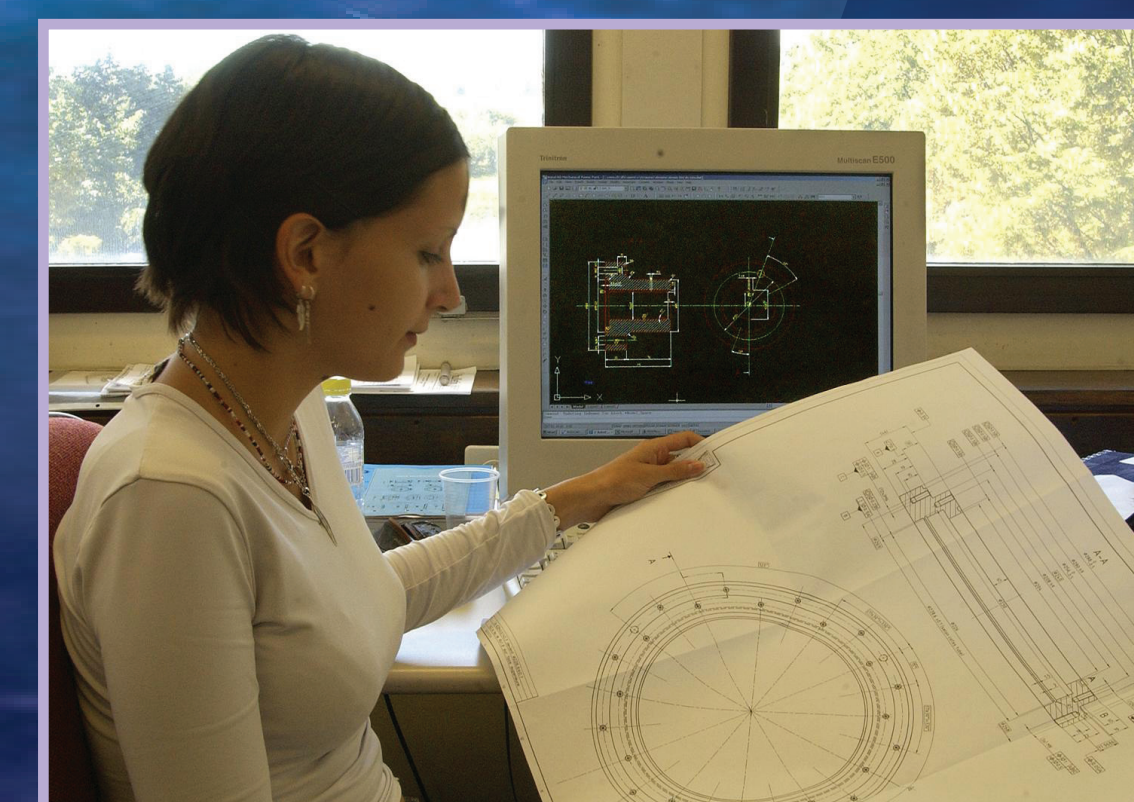

"Action is needed at the secondary school level, as soon as girls reach adolescence, to show that careers in science are not only for men." Géraldine Servant

"I think our work as a physicist is very challenging. We face different issues every day working in a team. I would never exchange what I am doing with a routine job in an office." Silvia Miglioranza, PhD student

"In my opinion the greatest thing about particle physics as a profession is that we work in international teams and are doing exciting and groundbreaking research and try to answer very basic, almost philosophical questions." Freya Blekman

"I like the environment so much. I like the collaboration. I like the freedom I have in my work every day." Manuela Cirilli

"What I do is not in text book." Monica Dunford
